Idea and Viability
(SCORE: 73%)

INTRODUCTION

Mantle is a high-performance Ethereum layer-2 network built with modular architecture delivering low fees and high security. Builders can leverage Mantle's unique design to build dApps with exceptional UX, all while relying on Ethereum's unrivaled security. Uses an optimistic rollup with an innovative data availability solution.

This allows Mantle to inherit security from Ethereum AND offer cheaper and more accessible data availability. Mantle is able to increase transaction throughput beyond traditional L2s. Accessible data availability also means Mantle can increase throughput without compromising on security and reducing the overhead of node operations. This decreases the processing requirement for validators and promotes increased decentralization. Many projects are already recieving funding from venture capitalist firms such as BITDAO to build dApps on the L2 solution which shows the interest and potential this technology has.

SHORT TERM : The token that will be used for gas has only recently entered the test-net. Short term will be promising if they hold a presale or private sale event for the public.

LONG TERM : A long term project with notable VC backing, this can gain traction quickly as more developers jump on to utilize the data compression on their L2.

Team and background
(SCORE: 76%)

There is no formal information on the team but there is a lot of information on the owner and although not doxxed, his background can be vouched for and is extensive and reputable in the industry. From 2006-2010 he worked in various job roles as a system and network administrator, tech product manager, and worked as tech product engineer while doing freelancing on the side. Some more notable job roles include, Berkshire Hataway as a director of innovation and being a lead of operations, and then following being a strategic advisor at Metamask.

His full profile is attached below and has been accredited by various sources: **https://www.linkedin.com/in/jacob-c-202286a5**

Social presence and Hype factor (SCORE: 85%)

The Telegram community is active and lively with an insane ratio of 3, 000 active members online to the 13, 000 total but Discord is really where it's at with 70, 000 members total and an active group with 7, 500 online members actively engaging with each other and the project in a professional manner. Twitter is also solid with 65, 000 members that are all active as can be seen from their posts and the amazing amount of real engagement they are receiving.

Tokenomics and Contract Analysis (SCORE: NA)

No tokenomics yet as the project is still in test-net phase due to the scale of the ecosystem they are building.
